

There is no issue before our people more vital and of more direct concern than the proposition of waterworks. This concerns the interest of everyone, and at the special election to be held next Saturday, July 4th, few, if any, will vote against the improvement.

SUBSCRIPTION, \$2.00 PER ANNUM, ALWAYS IN ADVANCE.

BAY ST. LOUIS, MISSISSIPPI, SATURDAY, JULY 2ND, 1921.

Special Election Saturday.

There will be a special election held in Bay St. Louis on Saturday, next, for the authority to issue \$93,000 bond issue for the purpose of the City owning its waterworks system. Our people are acquainted with the proposition and will vote "YEA."

NOTICE OF CITY BOND ISSUE

Whereas the Board of Mayor and Aldermen of the City of Bay St. Louis at a previous meeting decided that it was necessary for the public health and convenience and for fire protection, that the City own and operate its own water works system and;

Whereas, the Board of Mayor and Aldermen have employed an Engineer and tentative plans and estimates have been made, filed and approved and as the City has no funds available with which to construct its water works, Therefore;

Be it Resolved by the Board of Mayor and Aldermen of the City of Bay St. Louis that it is their intention and purpose to issue bonds of the City of Bay St. Louis, Miss., in the sum of Nine Thousand, (\$93,000) Dollars or so much thereof as may be necessary at a rate of interest not exceeding six per cent per annum for the use of constructing and maintaining a water works system in said City for the use of the people of said city at a cost rental or charge to be fixed for all purposes as may be designated by the Board of Mayor and Aldermen.

Be it Further Resolved; that this resolution be published and election held in accordance with Chapter 206 of the laws of Mississippi of 1920 and Section 2914 of the annotated code of 1906 of the State of Mississippi (section 5968 of the Hemingway Code) and such other sections of the State of Mississippi and such amendment of the annotated code of 1906 of the laws of 1920, as may be necessary.

A special invitation will be sent to the editors of the country press to attend. Between them, the farmers, the merchants and the produce dealers, there will be a great meeting with a view to bring the country and the city closer together.

This is the first Congress of the kind ever held in the South, and the business interests of New Orleans are behind it in an effort to put over an event that will be memorable and productive of results.

The Mississippi A. & M. College and the Louisiana State University have endorsed the movement, and the Governors of Mississippi and Louisiana have agreed to issue proclamation. A similar request has been made to the Governor of Alabama.

The railroads will make low rates for the event.

BIG EVENT IN NEW ORLEANS.

New Orleans is making preparations to entertain the largest number of old-time fiddlers ever gotten together within bow distance.

It is planning the biggest old-fiddlers contest the South has ever known, and is offering large cash prizes for the oldest fiddler, the one who has come the longest distance, and the best performer. Other prizes will be announced later. Prizes will be in money and silver loving cups.

The contest is open to all fiddlers. The event is one of the main features of the Inter-state Farm Congress that will be held there September 12 to 17.

The purpose of the Congress are:

1. Increase farm production.
2. Broaden and stabilize the New Orleans market.
3. Develop fair dealing between produce dealers and farmers.
4. Urge the growing of quality food products and the raising of pure bred livestock.

5. Stress the necessity of proper grading and packing in standardized containers.

6. Develop a good roads plan.

A special invitation will be sent to the editors of the country press to attend. Between them, the farmers, the merchants and the produce dealers, there will be a great meeting with a view to bring the country and the city closer together.

This is the first Congress of the kind ever held in the South, and the business interests of New Orleans are behind it in an effort to put over an event that will be memorable and productive of results.

WITH THE THEATRES

A. & G. Beach Front.
Monday, July 4th—May McArry, in "A Private Scandal" and Larry Semon in a two-reel comedy.

Tuesday, July 5th—King Vidor in "The Jack Knife Man," Fox News and Mutt and Jeff.

Wednesday, July 6th—The Braving Iron," a special production by Reginald Barker also a two-reel comedy.

Thursday, July 7th—James Oliver Curwood's "The River's End" a 1st National Special and a two-reel Terville Special, trolley comedy.

Friday, July 8th—Jack London's "The Little Fool" and Fox News.

Saturday, July 9th—Genie Melford's "The Sea Wolf," a Paramount Arctic special and two-reel Mack Sennett comedy.

bonds to the amount of \$93,000, or so much thereof as may be necessary with interest at the rate of six per cent per annum, for the construction or erecting of water works in said City for public use.

ATTEST: R. W. WEBB,
SYLVAN J. LADNER, Mayor
Secretary.

FOR BOND ISSUE.
AGAINST BOND ISSUE.

Notice is therefore given that a special election will be held at the City Hall, on Saturday, the 6th day of July, 1921, during the legal hours to determine whether the City of Bay St. Louis, Mississippi, shall issue

The Sunbeam Echo

WATERWORKS APPRAISAL
COMMITTEE.

Committee of Three Selected to Represent Chas. Sanger and City of Bay St. Louis in the Matter of Waterworks.

Pursuant to agreement of Mr. Chas. Sanger, owner of the present Bay St. Louis waterworks system, and the Board of Mayor and Aldermen, representing the city in the matter of proposed municipally-owned waterworks system, the membership of the Committee of Three for appraisal of the Sanger system, has been appointed and is given out to the Echo in order the public might get acquainted.

The following letter, received by his honor, the Mayor, yesterday, conveys the information and is herewith officially given out. A better committee could hardly have been selected.

It is one of the persons of which inspires confidence and anything it may do will represent the very best that can be done in the premises.

We feel satisfied the interest of the city and the tax-payers will be safeguarded in the selection of H. D. Shaw, of Gulfport, civil engineer.

The appointment of Mr. Sanger of John Sutter of Paisano Christian, also gives general satisfaction and the appointment in turn of E. L. Hamilton, of Gulfport, since he was named by the other two gentlemen of the committee must as a matter of course be accepted as satisfactory.

Of this, we have no doubt. We feel it has been stated by others who can speak with authority, and who know whereof they speak, that this is an excellent committee, and their work of appraisal will result to the satisfaction of all concerned and to mutual benefit as well.

Should the election for the proposed bond issue carry, of which there appears no doubt, and the findings of the committee make it possible to purchase the Sanger system, in order to eliminate competition and to place the city-owned system, as proposed, on an immediate basis, then the purchase of the Sanger system will be affected as soon as practicable, and we feel that the city will have best served the tax-payers from a financial and economic standpoint and the consumers of water given not only the best for the least money but the most as well. For it is well-known that the city purchase the present system will at once extend it and ancioliate it to an extent not to be compared with the present so much so that larger mains will be installed in the business and other congested districts and new wells drilled in order to augment the water pressure.

The letter referred to above, follows:

Gulfport, Miss., June 29, 1921

Mr. R. W. Webb, Mayor,
Bay St. Louis, Miss.

Dear Mr. Webb:

Mr. John Sanger came to see me the other day and stated that he would represent Mr. Sanger on the Waterworks Appraisal Committee.

Mr. Sutter and I agreed to select Mr. E. L. Hamilton, of this city, as the third man.

I am entirely pleased with these gentlemen, and I do not hesitate to believe that you may expect a report that will be fair to all parties concerned.

With personal regards, I am,

Sincerely yours,

H. D. SHAW.

NEW PICTURE HOUSE AT POP. LARVILLE

Poplarville is very proud of its new motion picture theatre, one of the very finest of its kind in the State, and which formally opens today, with a cinema feature extra-

dition for which is worth.

Mr. Fred Banderet, of Bay St. Louis, well-known driller in the Southwest oil fields and a man whose knowledge in the premises is extensive, has expressed the same opinion on many occasions. "But," he has said, "if oil exists in Mississippi, one would have to drill so deep as to make the experiment well high prohibitive and the quantity of production would be doubtful."

The Clarion-Ledger's article follows:

"State Geologist Lowe has called attention to an article by himself in which he points out the foolishness of 'wildcating' for oil in Mississippi. Mr. Lowe states that there is no sense in the people of Mississippi being continually drilled in the matter of oil signs and other things that have been brought up by some fake geologist or oil driller who is out of a job to induce the people to place their hard-earned cash in such wildcat measures. The companies who make it their business to locate and develop oil producing territory have never started any sort of property developments in Mississippi, simply because there has been absolutely no indication that were good enough to warrant their even spending a small amount of money on 'Shoemaker, stick to your last' is the very excellent advice that the efficient State Geologist hands out to the people of Mississippi."

MRS. REIFENSTEIN, AGED 67, GAINS 25 POUNDS

Declares She Would Like To Put a Bottle Of Tanlac In The Hands Of Every Sick Man, Woman and Child In This Country — Never Saw Its Equal.

"I am sixty-seven years of age, but in all my experience I have never known a medicine like Tanlac. Think of it! At my age to gain twenty-five pounds in weight, but that is just what I have done," said Mrs. Emma Reifenstein, of No. 337 Webster avenue, Syracuse, N. Y.

"If I had it in my power," she continued, "I would put a bottle of Tanlac in the home of every sick man, woman and child in this country, for I know what this wonderful medicine would do for them. For almost two years I was almost a nervous wreck. I did not dare to leave the house or even go up town unless my husband went with me. I was afraid to even cross the street and had a feeling of dread all of the time.

"My stomach was weak and easily upset. For days at a time I would go without solid food. I could not rest at night to do any good and felt tired and worn out all of the time. Some days I could hardly drag myself across the room and was so weak and miserable I was ready to give up.

"My health is fine now, and I eat anything I want and never have a touch of indigestion. I have never slept better than I do now. My recovery is the talk of our neighborhood, as it was generally believed I could not last but a few weeks longer. This is just

MRS. EMMA REIFENSTEIN,
337 Webster Ave., Syracuse, N. Y.

medicine has brought me health and happiness and I just can't say enough of its praise."

Mr. J. Reifenstein, in commenting on his wife's statement, said: "Yes, her recovery has been a happy surprise to us all. A few weeks ago I had no idea she would be able to pull through, but now she is in better health than I have ever seen her and the credit is due to Tanlac. We have been married fifty-two years today and I don't believe I have ever seen her looking any better."

Tanlac is sold by leading druggists everywhere. —Adv.

BROUGHT BACK OLD TIMES

Familiar Phrase Touched Responsive
Chord in the Breast of Former
War Comrades.

A jostling, heaving crowd was struggling for the few vacant places on the last bus home. A tired-looking conductor, weeping on his breast the 1915 ribbon, regulated the rush.

"Pull up!" he cried at length, effectually barring further progress to a sturdy, built young man who had swum himself on to the platform.

The latter stepped off reluctantly, exclaiming, "Sau Fairy Ann." The conductor turned quickly and laughed, and the demobilized soldiers on the bus who recognized the barbarous but familiar perversion of "Ca ne fait rien," laughed with him. "Come on," he said, and the man jumped on the moving bus with a smile of understanding in his eyes.

A catchword, universally used in France, had revived something of the army spirit or camaraderie. —London Chronicle.

Like a Letter.
Absentmindedly the young woman yawned. "Pardon me!" she said. "I didn't mean to do that."

"I see," returned Mr. Staylate. "Opened by mistake."

Arkansas Consolation.
Some of these fellows who are always complaining that the world doesn't understand them ought to be glad of it. —Walnut Ridge Blade.

If there is another world war the nation that yells "enough" will have to give proof that it is satisfied.

Some people seem to think they are bestowing a favor every time they smile.

If eccentricity were genius all mad houses would be universities.

ONLY UNITED STATES HAS
AL FRESCO INAUGURATION

If President Harding had been inducted into the chief office in some other republics on March 4, the ceremonies would have varied from a simplicity even greater than that he insisted upon, to an investiture of almost regal splendor.

If he had followed the customs long observed in France, the ceremony would have taken place in the White House. Instead of taking a formal oath he would have uttered a pledge to consecrate himself to the service of the republic and he would have ended by kissing the retiring President on both cheeks.

If he had been made President according to the practice of the Mexicans, he would have taken the oath in the hall of the house of representatives at midnight. After the administration of the oath he would have received the embrace of his predecessor.

In Brazil, after being sworn in, he would have hung across his chest a broad band of the colors of the country, supporting a medal—the insignia of the presidency.

In Chile, following the taking of the oath before a joint session of congress, he would have gone through streets lined with soldiers at "present arms" to a special Te Deum service in the principal church of the city. Immediately afterward he would have held a reception and would then have paid a visit to the ex-president.

If he had been inducted into the presidency of the war-torn and war-threatened republic of Poland, he would have gone to a "White House"

fuel problem solved?

Forced by the high price of imported coal to make use of a low-grade fuel, the inventors of Postum have solved the fuel problem.

Postum is a cereal that burns

ICELAND: LACKS ICE AND RAILROADS

Carrying ice to Iceland will appear to most persons about as reasonable as carrying wheat to the Dakotas, cotton to Texas or beans to Boston. But to dispel this notion the Icelanders made an appeal during the past winter to Norway, the nearest European country, to ship them ice in order that they might save their herding harvest from being spoiled by the mild weather.

The land which has come down in history as Iceland might with more accuracy have been given a diametrically opposite title, and called "The Land of Fire." The surface of no other country, perhaps, is so deeply marked by the withering blasts that well up from time to time; and in no country of equal area are to be found so many volcanic peaks and vents. Nearly 5,000 square miles of the 40,000 of the country's area are covered by lava flows.

Iceland is approximately the size of Ohio and about 8,000 square miles larger than Ireland. It is only a short distance off the European coast of Greenland, and its northernmost cape just touches the Arctic circle. From there the midnight sun can be seen.

In spite of its position so near the North pole, Iceland, thanks to the Gulf stream, has a relatively mild winter climate. Reykjavik, the capital, is in the same latitude as Nome, Alaska, but has a January temperature milder than that of Munich, Germany, or Milan, Italy.

Icelandic summers, however, are cool, due to the large fields of ice that float down from the North. Grain cannot be grown satisfactorily, and all breadstuffs must be imported.

Though Icelanders, faced by implacable natural forces and conditions, have been unable to achieve any great degree of physical development on their lava-covered, short-summered island, they have made notable advances in less material fields. A truly remarkable literary development sprang up in this far northern island in the twelfth and thirteenth centuries, a full hundred years before the Renaissance began to make itself felt in sunny Italy.

In more recent times the Icelanders have shown themselves to be in advance of many parts of the world in their social and political ideas. Women had full political privileges in Iceland earlier probably than in any other civilized country. At the present time part of the Althing, the Icelandic parliament, is elected by proportional representation. Votes for women is not the only mark which feminism has placed on the life of Iceland. The custom of women retaining their own names when they marry is more general in Iceland, perhaps, than in any other modern country.

The political status of Iceland is in some ways peculiar. In effect it might be said to be an autonomous state in partnership with Denmark. It has no army or navy and is under no obligation to contribute either men or money to the Danish military forces. Denmark recognizes the country's permanent neutrality. Furthermore, the present arrangement is only temporary, and after December 31, 1940, either of the associated countries may demand a revision of the "Act of Union" which now unites them.

THE WINNING OF THE CANADIAN WEST

Discovery of oil in northwest Canada toward the Arctic circle has increased the importance of the western Canadian provinces near the United States border, which will be the doorway for the new oil treasury.

The prairie provinces of Manitoba, Saskatchewan, and Alberta were not without their bids to fame before this discovery. For example:

The last of the wild buffalo herd in America, survivors of the millions of animals which roamed the plains and woodlands of the continent, now ranges through northwestern Alberta. This province alone is estimated to contain 10 per cent of the world's known coal supply.

The myriad of wild ducks, geese, and other migratory fowl that fly northward each spring are for the most part bound for the northern parts of the three prairie provinces, where they build their nests and rear their young.

The three provinces are naturally considered at once, for among them they cover all of Canada which is in process of being settled, west of the older Great Lakes province of Ontario and east of the Rocky mountains. This is Canada's "West," where restless pioneer spirits from all lands are carrying out an empire as kindred spirits a generation or so ago wrought the wilderness of the Missouri valley and the "great American desert" into the rich states of today.

The Canadian pioneers have advantages over those who won the American West, in that they have better railroad methods and equipment, telephones and wireless. But they have a relentless new enemy in the bitter cold of the northern regions of the provinces. For though the southern portions are separated from the United States by only an imaginary line, and are similar to the northern reaches of Minnesota, North Dakota, and Montana, of which they are geographically a part, to the north the three provinces sweep to within 500 miles of the Arctic circle.

The predominant part of the population and development of the three provinces is in their southern halves. In this region Winnipeg, capital of Manitoba, with its population close to 200,000, is Canada's Chicago of a generation, or so, ago; while Edmonton, capital of Alberta, is the St. Paul of a similar period. The northern portion of the provinces is a region crossed by many rivers and dotted with numberless lakes, a region divided between woodlands and "muskegs" or swampy flats. There the trapper still reigns supreme and life is primitive.

About four thousand pounds of roses are produced on an acre of land, but it takes about two hundred pounds of petals to produce an ounce of oil, or an attar which before the war cost about \$250 a pound.

Roses are grown in other parts of the Balkans, as well as in Asiatic Turkey, and in India, Persia, the Rayam province in Egypt, and in France. The industry lately has been introduced into Germany.

The animal perfumes are extremely limited in number. Ambregris is secreted by the sperm whale, civet by the animal of the same name, and musk by the musk ox, the musk rat, and the musk deer, which is found in the high Himalayas, Tibet, and eastern Siberia. About 15,000 ounces of musk, usually in the grain form, are annually imported to the United States from China and India. Musk has one peculiar and almost inexplicable characteristic. One grain of it kept freely exposed to the air of a well-ventilated room, will impregnate the atmosphere for ten years without sensibly diminishing in weight.

at whose doors were stationed cavalrymen with drawn sabers. When he went abroad he would be preceded, not by a trim policeman or an Arguedes secret service man, but by a herald who would demand that the populace "uncover before the most noble President."

And if Mr. Harding, instead of being installed as chief executive of the world's biggest republic, had been seated as one of the heads of the smallest republic, San Marino, he would have experienced the most elaborate procedure of all. He would have donned quaint medieval state garments; would have marched through the streets of the capital preceded by heralds and escorted by gorgeously-uniformed soldiers; would have attended a preliminary church service during which his predecessor would sit on a canopied throne soon to be occupied by him; and finally would have had placed on his head a headress indicative of his office.

In addition to differences in the official ceremonies by which the presidents of the world are inducted into office, there are many variations in the festivities and celebrations that accompany these events. In some cases the accompanying observances have become practically a part of the official procedure. The newly installed French president almost invariably drives to the Hotel de Ville, the Paris city hall, after taking office, to attend a luncheon and reception as the guest of the president and members of the municipal council. In Mexico, during the evening preceding the midnight induction into office, the president-elect usually attends a banquet given in his honor by the mayor of the City of Mexico. There is a public reception at the presidential palace the morning after the inauguration.

In Chile the inauguration day is often closed by a special concert at the municipal theater, and on the following evening the new president gives a state banquet for diplomatic representatives, special envoys and high officials of the republic and the provinces.

The United States, although its capital is in a more rigorous climate than those of many republics, is alone in having an "al fresco" inauguration.

Strange as all was the herbivorous Anklylosaurus, a stocky, short-legged, big-bodied creature, completely encased in armor. Dermal plates covered the skull, followed by rings of plates over the neck and rows of flat plates over the back and hips. Its tail terminated in a huge club, and the belly was covered by a pliable mosaic of small, close-set plates. It was further protected by a movable plate that could be dropped down like a shutter over each eye, thus completing its protection from insects and formidable foes.

TAKES CARE OF 5 CHILDREN

Mrs. Taylor's Sickness Ended
by Lydia E. Pinkham's
Vegetable Compound

Roxbury, Mass.—"I suffered continually with backache and was often disabled for a week at a time. For a month or two periods it was almost impossible to keep around at my work. Since my last baby came two years ago my back has been worse and no position I could get in would relieve it, and doctor's medicine did nothing for me. A friend recommended Lydia E. Pinkham's Vegetable Compound and I have found great relief since using it. My back is much better and I can sleep well. I keep house and have the care of five children so my work is very trying and I am very thankful I have found the Compound such a help. I recommend it to my friends and if you wish to use this letter I am very glad to help any woman suffering as I was until I used Lydia E. Pinkham's Vegetable Compound."—Mrs. MAUDE E. TAYLOR, 6 St. James Place, Roxbury, Mass.

Backache is one of the most common symptoms of a dietetic disorder. Women should make the mistake of trying to overcome it by heroic endurance, but profit by Mrs. Taylor's experience and try Lydia E. Pinkham's Vegetable Compound.

MAN'S BEST AGE

A man is as old as his organs, he can be as vigorous and healthy at 70 as at 35 if he aids his organs in performing their functions. Keep your vital organs healthy with

GOLD MEDAL HAIRLEM OIL CAPSULES

The world's standard remedy for kidney, liver, bladder and uric acid troubles since 1896; corrects disorders; stimulates vital organs. All druggists, three sizes. Look for the name Gold Medal on every box and accept no imitation.

Awful Sick With Gas

Eatonic Brings Relief

"I have been awful sick with gas," writes Mrs. W. H. Person, "and Eatonic is all I can get to give me relief."

Acidity and gas on the stomach quickly turn up and carried out by Eatonic, then appetite and strength come back. And many other bodily miseries disappear when the stomach is right. Don't let yourself be troubled, indigestion and other stomach ills go on. Take Eatonic tablets after you eat—see how much better you feel. Big box costs only a trifle with your druggist's guarantee.

Cement Coated Nails.
Approximately one-tenth of the wire nails manufactured are now cement coated, according to H. A. Knight, who writes on the subject to the Iron Age. The nails are coated by shaking them up in a hot tumbling barrel with a compound consisting mainly of resin, from which they issue with a thin, tough coating which greatly increases their holding power. The friction of the driven nail with the wood melts the cement and forms a glue which takes fast the nail. —*Iron Age*.

The Kitchen Cabinet

(© 1921, Western Newspaper Union)

Half the world is on the wrong road in pursuit of happiness. They think it consists in having and getting and in being served by others. It consists in giving and in serving others.—Henry Drummond.

FOODS FOR THE CHILDREN

For desserts grapefruits used in place of nuts or even in salads make a desirable substitute that will not hurt children.

Our best authorities upon dietetics for children tell us that cereals should never be sugared, prunes and such dried fruits, cooked with the cereals, furnish the sugar need and are more wholesome. The seeds of the prunes, the woody fiber of the date and prunes and bulk to food and help to keep the bowels active. A child who is well nourished with good fruit, dried or fresh, will not so often crave candy.

Cornstarch pudding made with egg and milk with a little sugar to sweeten, served with cream and sugar, with cubes of jelly for a garnish, with half of a peach or pear served on top of the pudding.

Cocao made entirely of milk will often be taken when milk will be refused. Bread puddings made with egg, milk, a few dates, figs or raisins and serve with cream.

Plain sponge cake unfrosted. Milk coat with a white sauce made of cream or milk thickened or not. The more one can add to milk in flour and butter, the more the food value is increased.

Graham crackers buttered and put together as a sandwich. Graham crackers dotted with marshmallows and baked until they puff makes a safe confection or one that takes the place of candy.

Desserts suitable for growing children never include pastry of any kind, or rich cakes or puddings, fruits, fresh and cooked, with cake, custards, tapioca with fruit, gelatin dishes, ice cream, water ices and other simple combinations are permissible.

Sometimes the most wholesome of foods disagree; each child should be studied as a special problem and retarded growth leaves a weak link which may not appear until later life.

"The one who wins is the one who works; who neither labor nor trouble shirks; who bears his hands, his head, his eyes; The one who wins is the one who toils."

SEASONABLE GOOD THINGS

The following are a few wholesome dishes which will be enjoyed by the family:

Baked Ham in Cider.—Bake the ham until nearly tender, remove and take off the skin, cover with a thick layer of crumbs or a paste of flour and water; stick in a few cloves. Place the ham in a roaster or dripping pan with one pint of good sweet cider heated hot. Place in the oven and bake an hour, basting occasionally with the cider in the pan. Serve hot for the first meal, using the cider sauce. The bone may be used after the meat has been served to hold a cupful of split peas and half an onion for a half day, making a fine pea soup. Or the bone may be used boiled with cabbage, carrots, potatoes, turnips for a boiled dinner. Any leftover bits of fat should be carefully saved, fried out and used to fry potatoes.

Ham Pie.—Bake, mash, season and beat enough potatoes to nearly fill a baking dish. Butter the dish well and put in a layer of the potato—an inch thick, cover with a four-inch layer of minced ham, sprinkle a bit of mustard over the ham and one-half of a clove of garlic finely minced. Cover with another layer of potato. Smooth the top and mark off in squares with a silver fork. Dot with bits of butter and bake in a good hot oven until brown.

Pigeon Cutlets.—Cut pigeons in halves, through the breast and the back; let simmer until tender; press under a weight, first removing any bones which disturb the shape, retain the leg bone. When cold, egg and crumble and cook in hot fat. Serve with boiled onions, carrots or canned peas. Make a brown sauce of the broth, adding to it currant jelly. Dried mushrooms may be cooked with the pigeons, improving the flavor.

Onion Sandwich.—Lay thin slices of southern onion in cold water to crisp, then dry and cover with a highly seasoned salad dressing. Let stand ten minutes and place between slices of buttered bread. Serve at once.

Tasty Sandwich Filling.—Add two tablespooms of cold water gradually to three tablespooms of peanut butter to make it smooth enough to spread. Beat until creamy and add two tablespooms of tomato catsup. Mix thoroughly and spread on thin slices of bread.

Feed for Young Colts.—To the young colts, reasonable quantities of oats along with the roughage should be fed and pay good returns in making a big colt.

Arabs Give World Artificial.
"Arabs" is of animal origin and gives the best flavor. The Department of Agriculture says that the Arab is the best animal for the farm, which gives the best meat.

Comfort Baby's Skin

BIG VALUE OF SELF-FEEDER

Experiments Show Pigs Make More Gain When Hand-Fed by Man and Eat Less, Too.

Expenses may be made less by the use of the self-feeding plan in preference to the hand-feeding system in the hog lot. An experiment was conducted at the Kansas State Agricultural College to show the value of the self feeder in fattening 100-pound pigs and at the same time to show the amount of tankage required to balance a corn ration. This experiment was carried on by Dr. G. W. McCampbell, E. F. Ferrin, and H. B. Whitcher in swine breeding investigations in 1918 and 1919.

Twenty pigs of the same age, quality, condition and weight, were put into two dry lots. In groups of ten, the pigs in lot 1 ate from a self feeder, that was divided in two compartments, one having shell corn and the other tankage. The pigs in lot 2 were given all they could eat twice a day in mixture of ten parts shell corn and one part tankage. They were watered twice a day in both lots and the experiment was carried on for one hundred days. Three days at the beginning and end of the test the pigs were weighed and all weights and expenses were carefully recorded.

The pigs in lot 1 ate more corn and less tankage than the hand-fed pigs in lot 2. That a 5 per cent tankage could balance a corn ration in fattening 75-pound pigs was shown from this experiment, because the self-fed pigs consumed one part tankage and 20 parts corn.

A 100-pound gain in hand-fed pigs was produced by 6.8 bushels of corn and 38 pounds of tankage. The same gain was produced in the self-fed pigs by 5.8 bushels of corn and 17.66 pounds of tankage, that is to say, that the corn with tankage produced 14.7 pounds of pork in the hand-fed lot and 17 pounds of pork in the self-fed lot.

The self-fed pig gets more exercise than the hand-fed in the many trips he makes to the feeder and in this way probably will get more good from

Food Value of Beets.

Beets are one of the most important crops for the home garden. Seed can be planted just as soon as the soil is in condition to work. When the plants crowd, one another in the row, thin them out when they are young, and cook them as greens. Later, when

they are about an inch in diameter, both leaf stems and young beets can be cooked together. When the beets are larger the leaf stems become tough and woody. As a rule two plantings should be made, one extremely early and another in about four weeks.

Carrots should be planted just a little later than beets, and as soon as the plants are up they should be thinned. A second thinning will leave the plants one and one-half to two inches apart in the row and give a large space for growing enough fruit and berries of the different kinds to supply the average family.

Everbearing strawberries, which were a novelty a few years ago, are now being planted by thousands of gardeners, and they should find a place in every garden of the temperate region where space will permit.

Strawberries, however, can be grown under a very wide range of climatic and soil conditions. The same is true of the blackberry and the dewberry.

Raspberries are more limited as to distribution, and will not withstand the heat of summer in the South, or the extreme cold of the North. Their planting is confined almost entirely to the temperate regions, the Central and Eastern states and the Pacific Northwest. Certain varieties of the red raspberry that are everbearing or that at least produce both a summer and fall crop of fruit are now being developed. Raspberries, blackberries, and dewberries do well when planted along a fence.

Parsnips and salsify are more in the nature of winter crops; that is, they are grown during the summer and kept for winter use. A section of row 20 to 30 feet long generally will produce all the parsnips or salsify that the average family will want.

CITY ECHOES.

L. B. Cardenpon, local representative for the Standard Oil Company informs the Echo that another drop in the price of gasoline has taken place. The price has taken a downward tendency of 2 cents per gallon. This is considerably a drop and at this rate "gas" will soon be at pre-war price.

Bishop John McDonald, splendid young son of Major and Mrs. W. A. McDonald recently returned home from the select school to which he is attending in Tennessee, and to which he intends returning during the early fall, and where he has made remarkable progress and won unusual merit in his class work. He is enjoying a well-earned vacation.

Mrs. George R. Reed was the guest of honor at an informal luncheon given Wednesday by Mrs. I. M. Lichtenstein in St. Charles avenue, New Orleans. Miss Fannie Rose Lichtenstein has gone to Chicago for the summer to attend the University of Chicago. Mr. and Mrs. Lichtenstein will join their daughter during the latter part of August and spend awhile at one of Michigan's resorts.

Bishop Robt. L. Jones, head of the colored A. M. E. Church far the local province, was a visitor to Bay St. Louis a few days since in the interest of the new church for Bay St. Louis, the minimum cost of which is \$16,000 and when completed, will easily cost \$20,000. The structure is to be built of brick and stucco. A community hall, to be located on the side of the church will be erected at the same time. A different location from the present will be used. The money for this church and hall is already in the hands of the proper authority, liberal assistance from funds created for the purpose, is available.

Mrs. C. A. Givens, accompanied by her daughter, of Ruston, La., who are spending a while at Biloxi, spent Monday in Bay St. Louis visiting at the home of their friends, Mr. and Mrs. F. C. Bordages, Sr., on the beach front. This was Mrs. Givens' first visit to Bay St. Louis in forty years, when she resided here and who before her marriage was Miss Weir. She expressed the intention of returning to this city to reside permanently, delighted with the native beauty of the place and the innumerable improvements she noted while on her visit.

A force of workmen have been at work clearing the tract of land corner Carroll and Dunbar avenues, recently purchased by R. L. Genin, from the de Montuzin estate. The land measures 800 feet on Carroll avenue and over 300 feet on Dunbar avenue, containing about five acres. Mr. Genin is easily a man of vision. He has purchased this as an investment. It is one of the best locations in the city. In the meantime he is having the timber removed and will put out over a hundred pecan trees of the paper shell variety. The land will soon become productive, and will help to remove the all too much idle and non-productive lands hereabout.

With characteristic enterprise, the management of Bay St. Louis ferry announces the new summer schedule which took effect yesterday. The first boat will leave Bay St. Louis at five in the morning and the last boat will leave Henderson Point at 12 midnight, thus giving a day and night schedule, that, needless to say, will be generally welcomed. Capt. Drackett has been contemplating this for sometime, but did not think the patronage justified the move, however, the experiment will be made for one month and it is hoped the enterprise will be sufficiently patronized as to warrant a continuance.

The figure 8 frowns on old-fashioned wasday methods. For it is the magic figure in the 1900 Cataract Electric Washer which forces the water back and forth through the clothes, in a perfect figure 8 motion four times oftener than in the ordinary washer.

The swinging wringer is reversible, and also works electrically. The copper tub hasn't one single part in it—nothing to lift out and clean after the wash is finished!

We'd be glad to deliver a 1900 Washer right to your home, and let you try it out. When you have seen what it can do, you may start paying for it on terms to suit your convenience.

NO JOB TOO SMALL
NONE TOO LARGE.

Misses Carmelite and Mercedes Spornos are prolonging their visit to Natchez, Tenn., where they went some time since to attend the Peabody Normal. The young ladies have formed quite a number of friends in social circles, and after study hours find much pleasure in outdoor and other social entertainments.

The Bay St. Louis Woodmen of the World organization will this year celebrate their sixteenth annual Fourth of July celebration Monday, and the different committees are active to that extent that success is assured. The Woodmen is one of the best organized, most solid organizations, has a large membership, and is indeed a representative body. The celebration ought to be largely attended, as we feel it will, and the Woodmen benefit liberally patronized.

Commissioner Leopold Bangard has completed splendid work along St. Charles street, and that thoroughfare presents a most attractive appearance, adding to the desirability of the city as a place to live in and invite strangers and add to the value of property. Mr. A. Franz, property owner and resident of St. Charles street, is enthusiastic over the work, and tells The Echo to present his compliments to Street Commissioner Bangard and the city administration in general.

Brick masons have completed the work on the new Edwards' garage building, Main, near Front Sts., and although the interior or the roof has not as yet been built, an idea of the size and handsome appearance of the building can be had. It will easily rank with one of the finer business buildings of the city, and add largely to the business section of the city. Messrs. Edwards have evinced their business ability and faith in the future of Bay St. Louis and Hancock County, building so well and on so large a scale.

Waveland has more than her regular quota of summer visitors this season. We are informed that every place available is occupied, and quarters that were generally allocated to "help" about the premises has been requisitioned for visitors. Quite a number of new houses and places of the better quality and size have been built this spring in Sears avenue and vicinity. It is a great pity the Waveland road cannot be restored to its former condition and beauty.
